

Quickly Learn The Best Choices During Play Regardless Of The Count

Blackjack is a game of skill and chance. While there is no guaranteed way to win, there are certain strategies that you can use to improve your odds. One of the most important aspects of blackjack is learning how to make the best choices during play. This means knowing when to hit, stand, double down, or split. The best choices will vary depending on the count, which is a measure of the number of high cards and low cards that have been played.

Basic strategy

How -To Become a Good No Count Blackjack Player: Quickly learn the best choices during play regardless of the count by John Renner

Basic strategy is a set of rules that tells you the best possible play for every possible hand against every possible dealer upcard. It is based on

mathematical calculations and takes into account the count. Basic strategy is the foundation of all blackjack strategy, and it is essential for any player who wants to improve their game. You can find basic strategy charts online or in blackjack books.

Card counting

Card counting is a technique that can be used to gain an advantage over the casino. By keeping track of the number of high cards and low cards that have been played, you can estimate the composition of the remaining deck. This information can then be used to make better decisions about when to hit, stand, double down, or split.

There are many different card counting systems, but the most popular is the Hi-Lo system. The Hi-Lo system assigns a value of +1 to high cards (10s, jacks, queens, kings, and aces) and a value of -1 to low cards (2s, 3s, 4s, 5s, and 6s). Whenever a high card is played, you add 1 to your count. Whenever a low card is played, you subtract 1 from your count.

The count can be used to make a variety of decisions, including:

- **When to hit:** If the count is high, you should hit more often. This is because there are more high cards in the deck, which means you have a better chance of improving your hand.
- **When to stand:** If the count is low, you should stand more often. This is because there are more low cards in the deck, which means you have a better chance of busting if you hit.
- **When to double down:** If the count is high and you have a good hand, you should double down. This means you will double your bet

and receive one more card. This is a good way to increase your winnings.

- **When to split:** If you have a pair of cards that can be split, you should split them if the count is high. This means you will play two hands instead of one. This is a good way to increase your chances of winning.

Card counting is a complex technique, but it can be very effective if used correctly. If you are serious about improving your blackjack game, I recommend learning how to count cards.

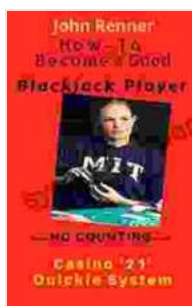

Other techniques

In addition to basic strategy and card counting, there are a number of other techniques that you can use to improve your blackjack game. These techniques include:

- **Shuffle tracking:** Shuffle tracking is a technique that can be used to track the location of specific cards in the deck. This information can then be used to make better decisions about when to hit, stand, double down, or split.
- **Hole carding:** Hole carding is a technique that can be used to see the dealer's hole card. This information can then be used to make better decisions about when to hit, stand, double down, or split.
- **Deviation from basic strategy:** There are certain situations where it is optimal to deviate from basic strategy. For example, if the dealer has a very weak upcard (such as a 2 or a 3), you may want to hit more often than basic strategy would dictate.

These techniques are more advanced than basic strategy and card counting, but they can be very effective if used correctly. If you are serious about improving your blackjack game, I recommend learning more about these techniques.

Blackjack is a game of skill and chance. While there is no guaranteed way to win, there are certain strategies that you can use to improve your odds. By learning basic strategy, card counting, and other techniques, you can become a more profitable blackjack player.
